General Description

TriQuint's TGA2611 is a broadband Low Noise Amplifier fabricated on TriQuint's production 0.25um GaN on SiC process (TQGaN25). Covering 2–6GHz, the TGA2611 typically provides 22dBm P1dB, 25dB of small signal gain, 1.5dB of noise figure and 32dBm of OTOI. In addition to the high overall electrical performance, this GaN amplifier also provides a high level of input power robustness. Able to survive up to 2W of input power without performance degradation, TriQuint's TGA2611 provides flexibility regarding receive chain protection never before seen with GaAs technology.

Fully matched to 50 ohms with integrated DC blocking caps on both I/O ports, the TGA2611 is ideally suited for radar and satellite communications.

Lead-free and RoHS compliant
Evaluation Boards are available upon request.

Application Circuit

Bias-up Procedure

1. Set I_D limit to 175mA, I_G limit to 1mA
2. Apply -5V to V_G for pinch off
3. Apply +10V to V_D
4. Adjust V_G more positive until $I_{DQ} = 110\text{mA}$ ($V_G \sim -2.3\text{ V Typical}$)

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.
- Organic attachment (i.e. epoxy) can be used in low-power applications.
- Curing should be done in a convection oven; proper exhaust is a safety concern.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300°C to 3-4 minutes, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
