RFSA2534 Programming by Using USB Interface

Refer to Qorvo Control Bit Generator (CBG) Software Reference Manual for detailed instructions on how to setup the software for use. Apply the supply voltage to P1. Select RFSA2534 from the Qorvo Parts List of the CBG user interface. Set the attenuation value using the CBG Graphic User Interface (GUI). The attenuator is set to the desired state and measurements can be taken.

RFSA2534 Programming by Using Its Serial Bus

This configuration allows the user to control the attenuator through the P1 connector using an external harness. Remove the USB interface board if it is currently installed on the evaluation board. Connect a user-supplied harness to the P1 connector. Send the appropriate signals onto the serial bus lines in accordance with the Serial Mode Timing Diagram. The attenuator is set to the desired state and measurements can be taken.
